

Myngl Concordance™

Scalable secure data commingling for self-service analytics and ML.
Accelerates data projects by 5x compared to conventional methods.

Without Secure Compliant Data Access, Your Teams Get Stuck:

Data is available, but not accessible to your teams when they need it. Sharing data for analytics is a requirement, but conventional approaches are overly complex, expensive, insecure and cumbersome.

Concordance Secure Analytic Containers empower your teams to securely commingle raw sensitive data from multiple owners while preventing misuse and breaches.

Concordance works differently by protecting many data owners, not just one.
